Foreword

Our advanced trading courses share the trading knowledge two seasoned professional traders accumulated over more than 20 years working in financial markets around the world, specially focusing on North America and Europe.

These traders earned an international award for excellence in fund management from Standard & Poors while trading and managing investment funds.

We will pass on to traders and investors going through these professional trading courses our methods and tactics in a simple yet effective way, sharing the vast experience in the area in 2 to 6 months time.

Our offer is comprised of three different and independent professional trading courses:

- **Introduction to Professional Trading**
- **Mature Trading (Long Term focused)**
- **The Advanced Trader (Short Term focused)**

A trader can opt to go through only one of these professional trading courses or all three together for a complete mastery on how to professionally trade financial markets.

Each one of these three consecutive professional trading courses comes with a growing level of trading knowledge and operational know how in financial markets.

Our methods and tactics are turn key trading solutions, whatever your investing timeframe is.

The Advanced Trader

1: Introduction to the Trading Course

This professional trading course focuses on Short, very Short and Long Term trading operations in financial markets.

The Advanced Trader course is the last and most complete professional trading course we teach, coach and mentor.

Chapter VI – Putting it all together – The Short Term

2: How to derive Short Term Context

2.1: Introduction

To determine a Market's Context is to understand that same Market in the past, present and even postulating about its future.

A Market's Context allows to understand its Trading Situation at any given moment in time, and When and How it should be approached when Trading whatever Timeframe or time horizon we so chose, from Long Term Investing all the way down through the Short Term Timeframes used in Intraday Trading for example.

This advanced part of the The Professional Trader Trading Course will focus mainly on preparing and Executing Short Term Operations in any Market These can be either in support of Long Term Operations or just performing Short Term Trading on the Markets.

Sometimes a Trader's understanding of a Market's Context can be automated, depending upon the Analytical Method or Tools being used, mathematical, programable or any other kind of functions and ideas.

If automated it can provide Traders a Market's Trading Context, whatever it may be in a matter of a few seconds or minutes.

Keep in mind that a Trader's Positions, Stops and Objectives are inherently connected to the kind of Trading Operations being conducted on that same Market, but a Market's Context is not.

In fact, a Market's Trading Context is the same to all Market participants who can correctly understand it.

So Traders working separately on different Timeframes will not have the same Stops, Objectives or Positions, but they will all have the same Trading Context reading about the Market as a whole. This is of course a generalization since a portion of the whole group of Market Participants will be right and the remaining ones wrong.

Remember some Traders will be wrong in their assumptions about the general situation of Financial Markets, or one particular Market ... nobody is perfect. This actually makes the Market itself, some Market participants buying, some selling, all at the same time with different Objectives and Time Horizons in mind.

The aim of this Professional Trading Course is to get you on the right side of the Markets the most amount of time possible.

A Market's Trading Context from Long Term Timeframes all the way down to the Shortest ones in a Market is the same, but when Trading Shorter Timeframes some refinements and specificities have to be accounted for. We will focus on these specific details.

Given your Context reading of a Market, it is your choice which moves to Trade and which not to.

The How and When and if to participate at all, are your choices alone.

A TRULLY PROFESSIONAL AND ILLUSTRATED MANUAL BUILT ON EXPERIENCE AND KNOWLEDGE

The Advanced Trader

1: Introduction to the Trading Course

It is intended for full on Scalpers, Intra or Next Day Traders, Swing and even Long Term traders or investors wanting to master the Short Term aspects of trading financial markets.

The Advanced Trader course allows traders to have a complete understanding of any market, from Short Term timeframes spanning a few minutes mostly suited to Intraday traders, to the Longer Term ones spanning months or years used mostly in investing.

MEDIUM TERM HIGH PROBABILITY OF SUCCESS TRADES

This last course can actually open the doors to professional Intraday trading anywhere around the world, head to head with anyone that actually masters trading, old or new, whatever organization small or big, period.

This course can also be used by trading professionals or non professionals alike wanting an upgrade to their trading skill set, so that they can then progress to a more advanced stage in their careers.

SHORT TERM MARKET ENTRIES

The Advanced Trader

1: Introduction to the Trading Course

It allows those wanting to set up their own trading businesses like Funds, Hedge Funds or any other endeavor in finance to have the necessary professional trading skills needed to do so.

This professional trading course includes a revisit to the first two trading courses we teach, Introduction to Professional Trading and Mature Trading.

This allows everyone to be on the same page knowledge wise when learning the Short Term trading approach put in place on this very advanced trading course.
